

# ABLOY® SMARTBOX

*Secure freight with key usage monitoring*

Financial losses incurred when freight disappears in transit can amount to a significant annual sum. The causes of such losses are difficult to monitor on a continuous basis because cargo can be accessed by anyone who holds the correct key.

**ABLOY® SMARTBOX** is a new key-control system installed in the truck cab. Keys that allow access to freight can be secured for the duration of each journey. If losses do occur, details of key usage will be found in the key usage register.

At the loading station, the control key is used to unlock the **ABLOY® SMARTBOX**, giving access to the key used to lock the tank filler pipes. When the cargo has been loaded, this key is returned to the **ABLOY® SMARTBOX** unit and the control key is then removed. This event is recorded in the key usage register.

During transportation, keys providing access to cargo are securely locked to the **ABLOY® SMARTBOX** key control unit.

On arrival, the control key held at the destination is used to release the key used to access the cargo delivery pipes. After unloading, this key is returned to the **ABLOY® SMARTBOX** key control unit and the event is recorded in the key usage register.

The key usage register feature is only available in combination with **ABLOY® PROTEC CLIQ** key as a control key.
